

FRIEDMAN

SIR-COMPRESSOR

Thank you for choosing the our Sir-Compre pedal, an optical compressor with the ability to achieve light overdrive.

Volume, Treble:

we know you know what these are.

Gain:

adjusts the amount of grit the pedal produces. For cleaner settings turn down to around 3 on the knob.

Comp:

controls the amount of compression.

Tight:

shapes the low frequency content. Turning it up tightens the sound.

Internal Switch:

turns pedal to a full fledged compressed overdrive.

True Bypass

18V Center Negative

Splitter Cable Included:

use when your power supply does not offer an 18V output. Splitter cable MUST be connected using 2 x 9V outputs. Power supply MUST have isolated outputs.

INTERNAL GAIN SWITCH

Adjusting Gain:

The Friedman Sir-Compre has an internal switch which adjusts the overall gain of the pedal. It is preset to the lower of the two settings. To change follow these instructions:

1. Use a small philips screwdriver to remove the bottom cover.
2. The internal switch is set to the down position which achieves less overall gain. If more overall gain is desired place the switch in the up position.
3. Re-install the bottom cover and enjoy the Friedman Sir-Compre.
